

<u>Creating/Translating/Running Java Programs:</u> <u>CPSC Network</u>

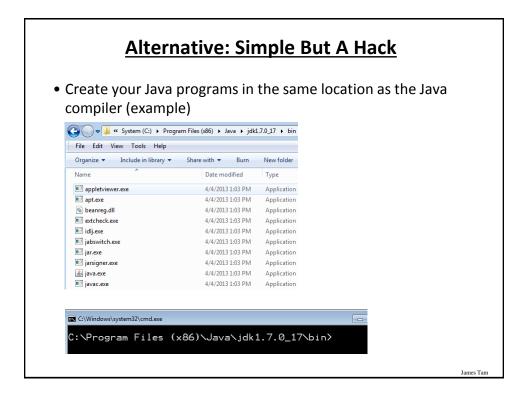

1. Create the program: Use the editor of your choice (e.g. file name = Smallest.java)

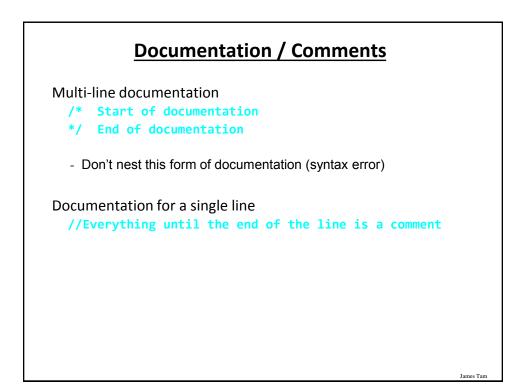

- Example command line input: emacs Smallest.java

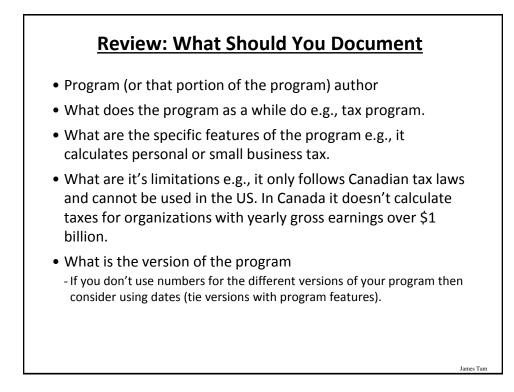

- Save the program as text files ending with a ".java" suffix

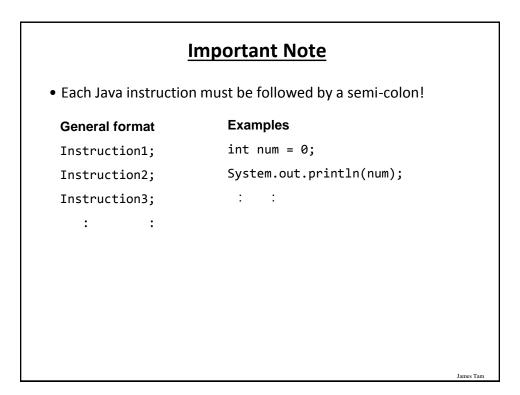

- 2. Translate the program: from Java to byte code format
 Intermediate binary for the architecture of a "virtual machine"
 Example command line input: javac Smallest.java
- **3. Translate and execute**: The generic byte code translated into an actual hardware specific binary (interpret the byte code) and execute the binary
 - Example command line input: java Smallest

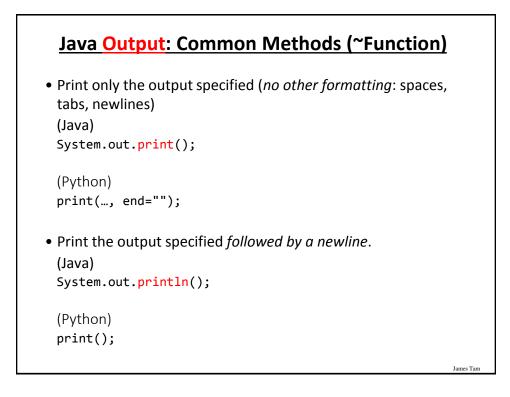

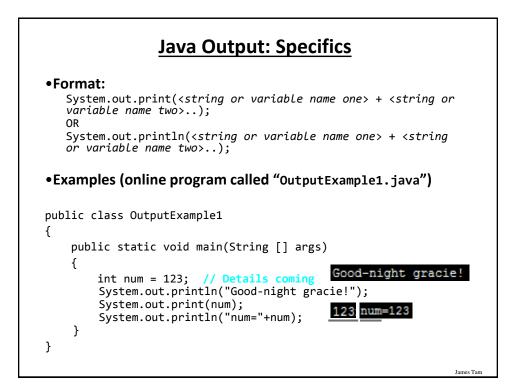

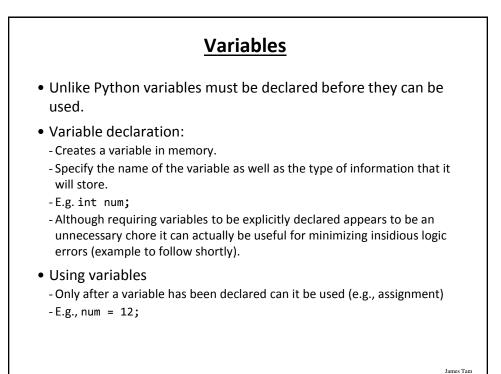

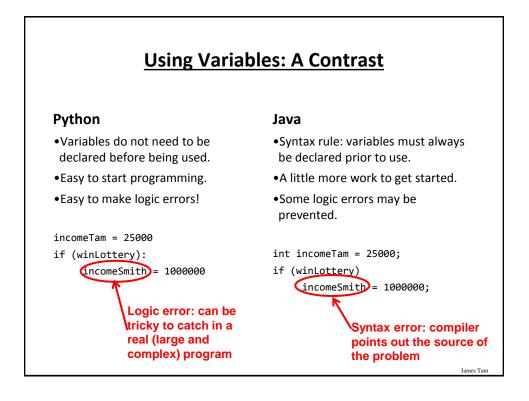

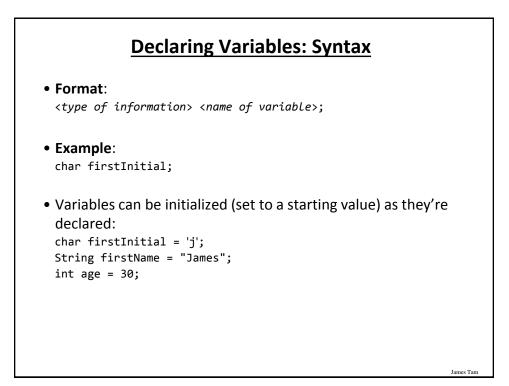

<u>Output : S</u>	Output : Some Escape Sequences For Formatting					
• •	ce is placed between to system.out.print("hi					
Escape sequence	Description					
\t	Horizontal tab					
\n	New line					
Λ"	Double quote	-				
XX.	Backslash					
L		1				
		James Tam				

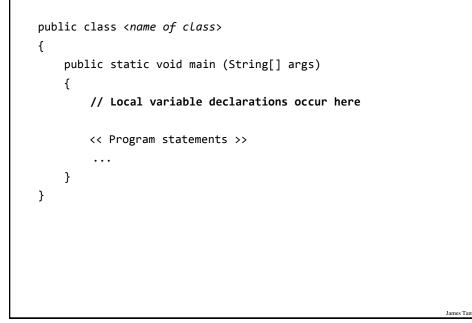

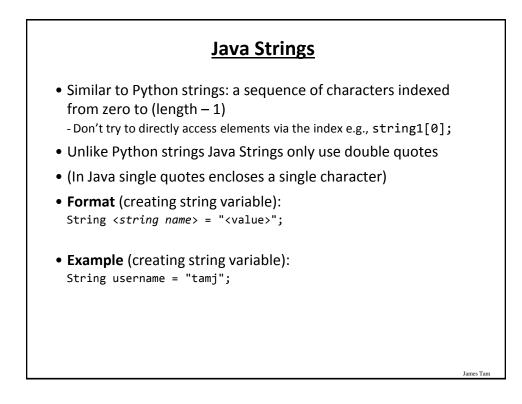

me Bui	It-In Types Of Variables In Jav
Туре	Description
byte	8 bit integer
short	16 bit integer
int	32 bit integer
long	64 bit integer
float	32 bit real number (rare)
double	64 bit real number (default for many operations)
char	16 bit Unicode character (ASCII values and beyond)
boolean	True or false value
String	A sequence of characters between double quotes ("")

Location Of Variable Declarations

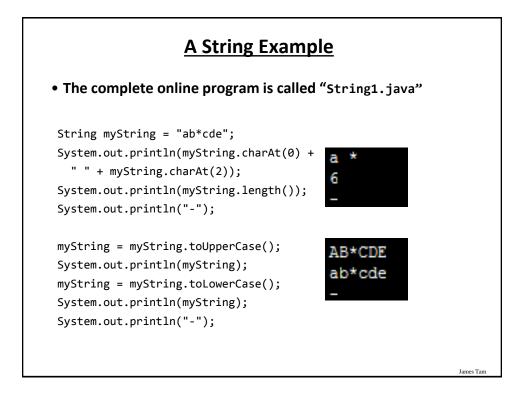

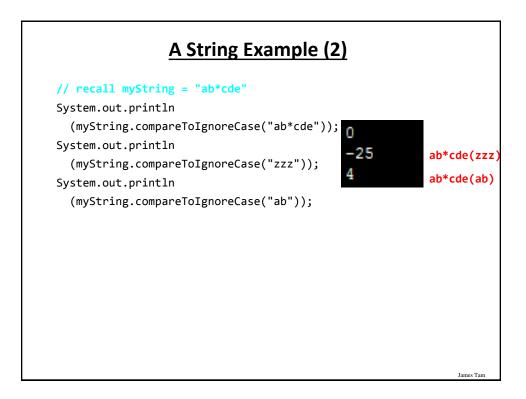

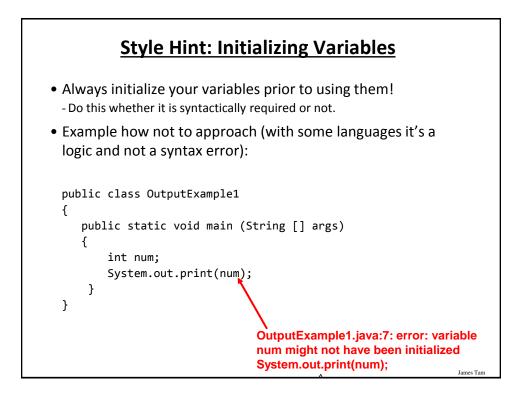

Common String Methods

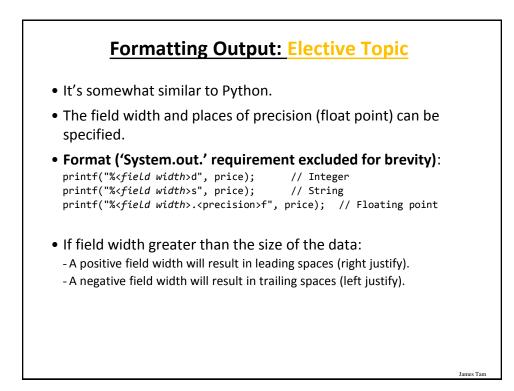

• Examples useful methods:

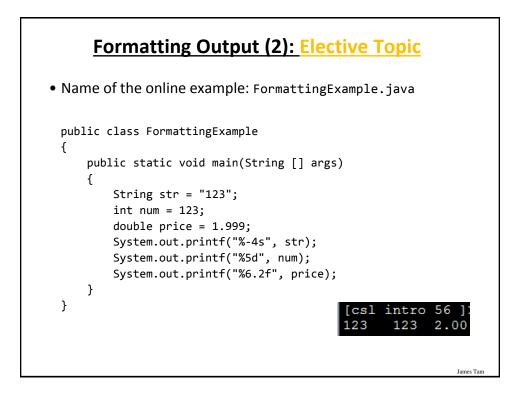

Method	Description
<pre>string.charAt(int)</pre>	Retrieves character at the specified index
<pre>string.compareTo(String s)</pre>	 Compares string with parameter: Zero returned if string and parameter equal Less than zero if the string comes before the parameter Greater than zero if the string comes after parameter
<pre>string.compareToIgnoreCase (String s)</pre>	As compareTo() but case insensitive
<pre>string.length()</pre>	Returns the length of the string
<pre>string.toLowerCase()</pre>	Converts alphabetic characters to lower case
<pre>string.toUpperCase()</pre>	Converts alphabetic characters to capitals
more info look under "class String" tp://docs.oracle.com/javase/8/docs/api/	

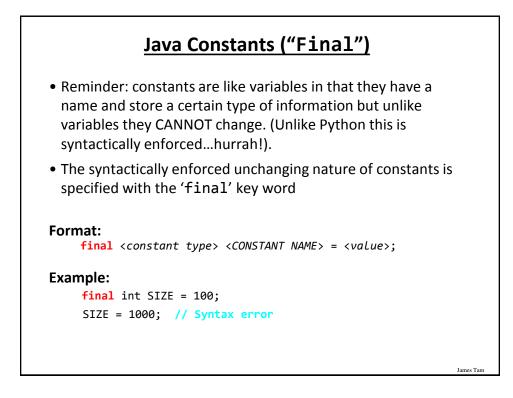

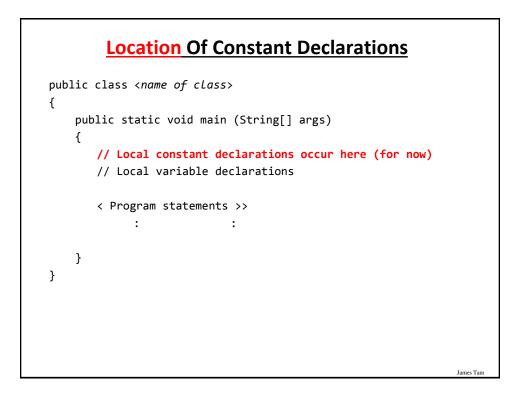

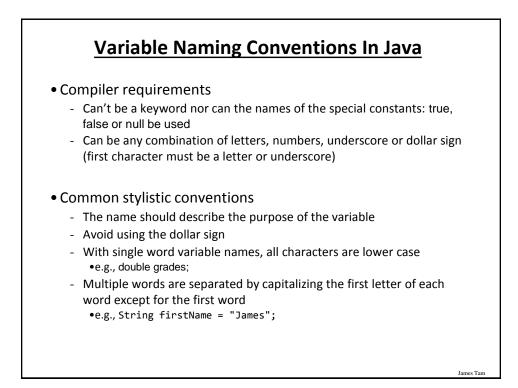

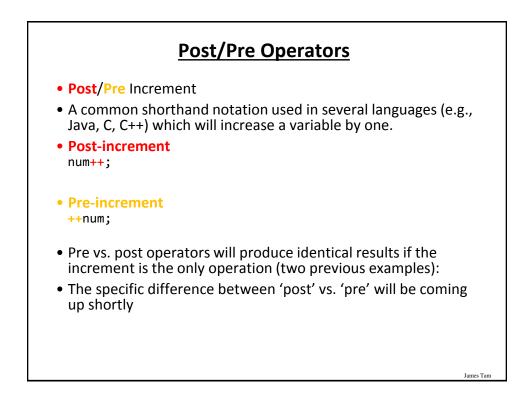

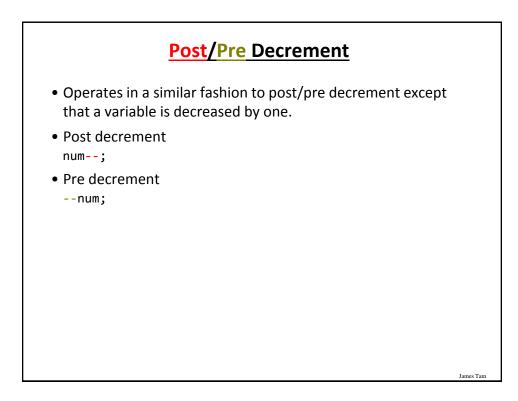

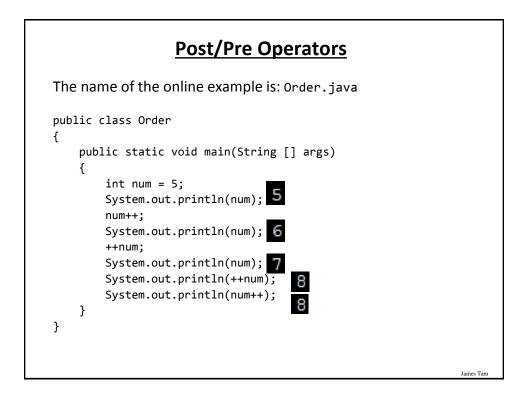

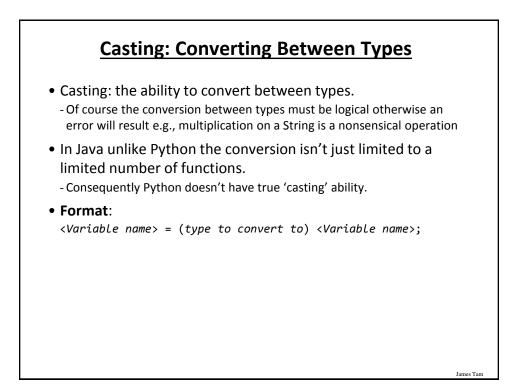

Java Keywords (Avoid Using As Identifiers)					<u>rs)</u>	
abstract	boolean	break	byte	case	catch	char
class	const	continue	default	do	double	else
extends	final	finally	float	for	goto	if
implements	import	instanceof	int	interface	long	native
new	package	private	protected	public	return	short
static	super	switch	synchronized	this	throw	throws
transient	try	void	volatile	while

OperationOperatorExample usageAssignment=num = 123;Addition+num = 2 + 2;Subtraction-num = 5 - 2;Multiplication*num = num * 2;Division/num = 9 / 3;Remainder%num = 9 % 2Negationnum;	<u>Common Operators</u>				
Addition+num = 2 + 2;Subtraction-num = 5 - 2;Multiplication*num = num * 2;Division/num = 9 / 3;Remainder%num = 9 % 2	Operation	Operator	Example usage		
Subtraction-num = 5 - 2;Multiplication*num = num * 2;Division/num = 9 / 3;Remainder%num = 9 % 2	Assignment	=	num = 123;		
Multiplication*num = num * 2;Division/num = 9 / 3;Remainder%num = 9 % 2	Addition	+	num = 2 + 2;		
Division/num = 9 / 3;Remainder%num = 9 % 2	Subtraction	-	num = 5 - 2;		
Remainder % num = 9 % 2	Multiplication	*	num = num * 2;		
	Division	1	num = 9 / 3;		
Negation - num;	Remainder	%	num = 9 % 2		
	Negation	-	-num;		

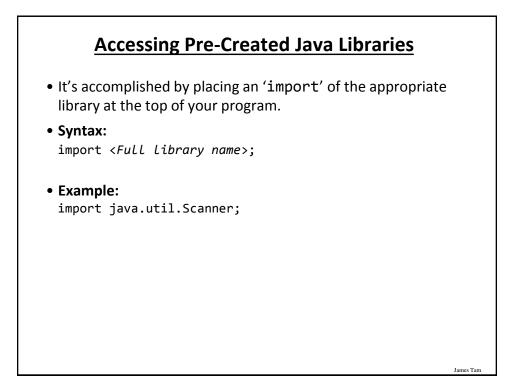

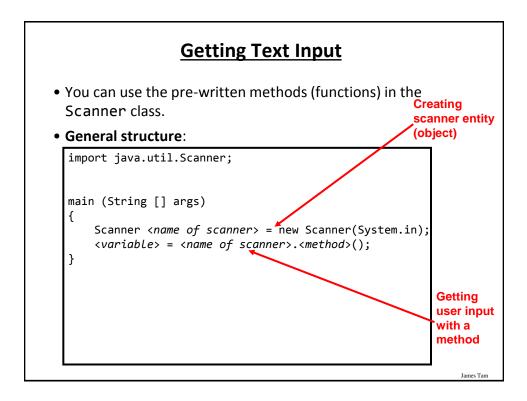

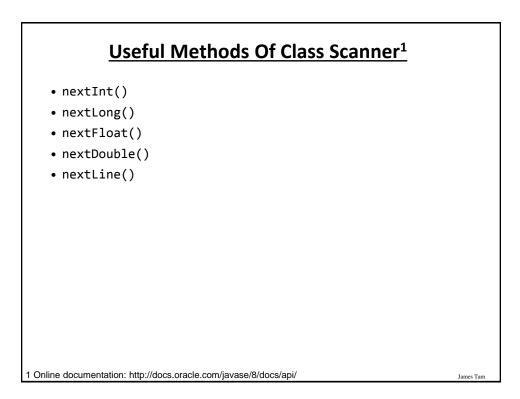

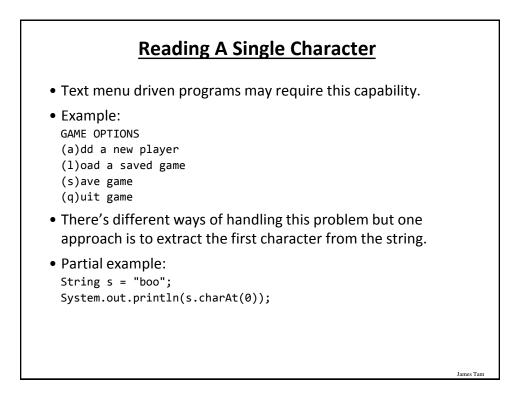

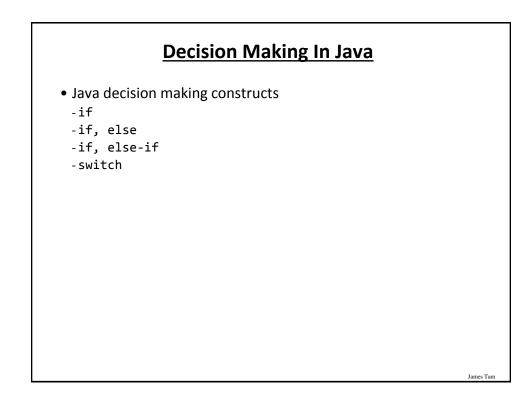

Getting Text Input (2)

The name of the online example: MyInput.java import java.util.Scanner; public class MyInput { public static void main(String [] args) ł String name; int age; Scanner in = new Scanner(System.in); System.out.print("Enter your name: "); name = in.nextLine(); System.out.print("Enter your age: "); age = in.nextInt(); System.out.println("Hi " + name + " you're " + age); } ì

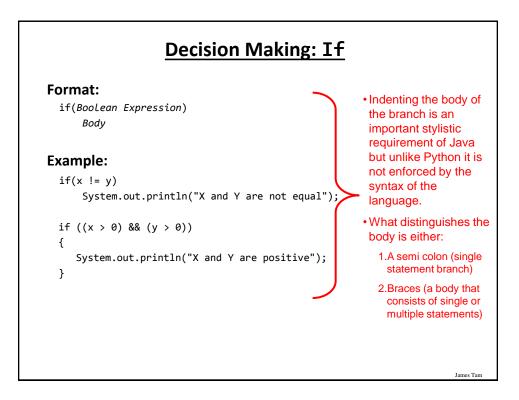

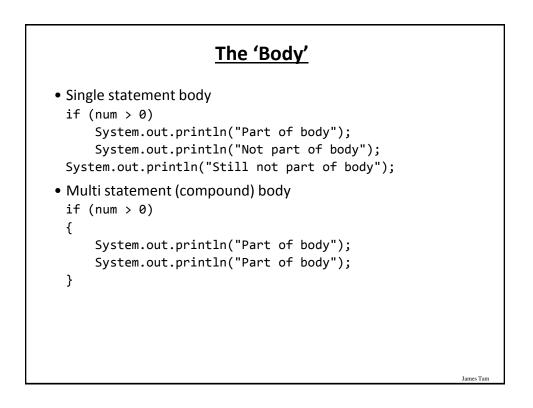

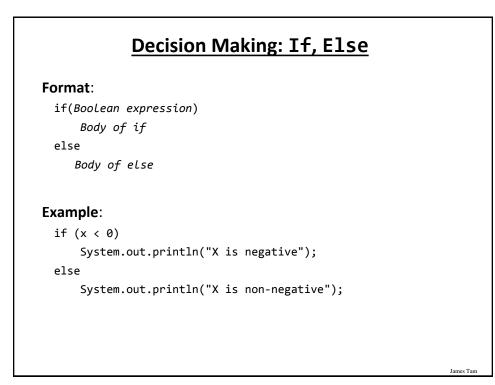

AND and && OR or II
R or
OT not !

Java Relational Operators						
if (operand	relational	operator operand)			
Java	Mathematical					
operator	equivalent	Meaning	Example			
<	<	Less than	5 < 3			
>	>	Greater than	5 > 3			
==	=	Equal to	5 == 3			
<=	≤	Less than or equal to	5 <= 5			
>=	≥	Greater than or equal to	5 >= 4			
!=	≠	Not equal to	x != 5			
			James Tam			

<u>If, Else-If (Java)</u> <u>If, Elif (Python)</u>

Format:

if (Boolean expression)
 Body of if
else if (Boolean expression)
 Body of first else-if
 ...
else if (Boolean expression)
 Body of last else-if
else
 Body of else

If, Else-If (2)

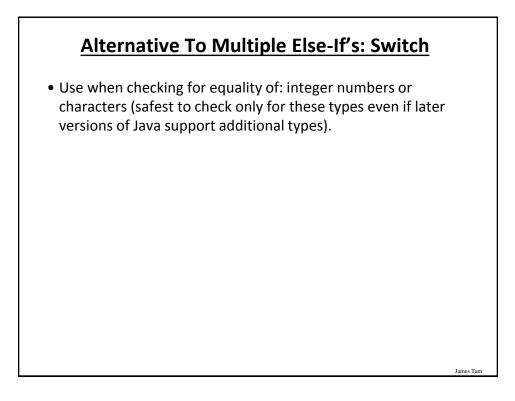

Complete example: IfElseIfExample.java

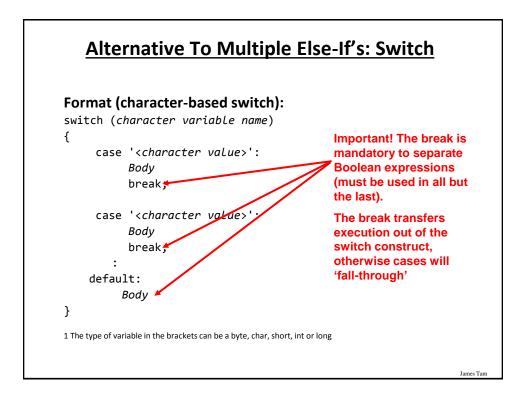

```
if (gpa == 4)
{
    System.out.println("A");
}
else if (gpa == 3)
{
    System.out.println("B");
}
else if (gpa == 2)
{
    System.out.println("C");
}
```

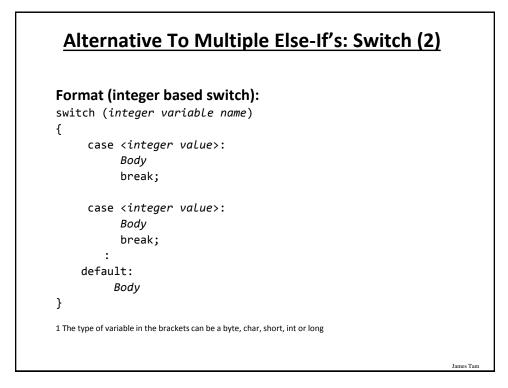

If, Else-If (2)

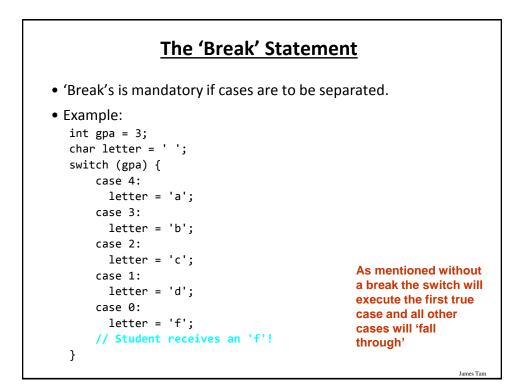

James Tarr

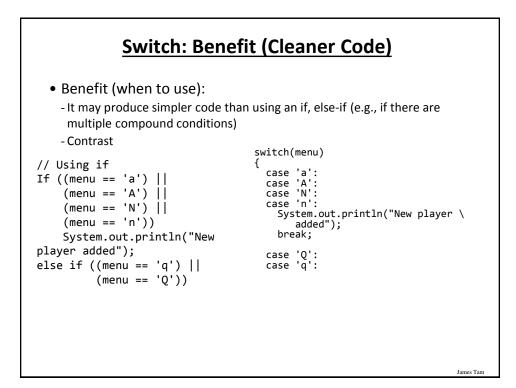

```
else if (gpa == 1)
{
   System.out.println("D");
}
else if (gpa == 0)
{
   System.out.println("F");
}
else
{
   System.out.println("Invalid gpa");
}
```

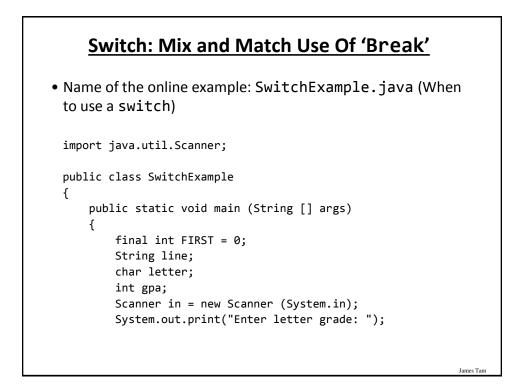

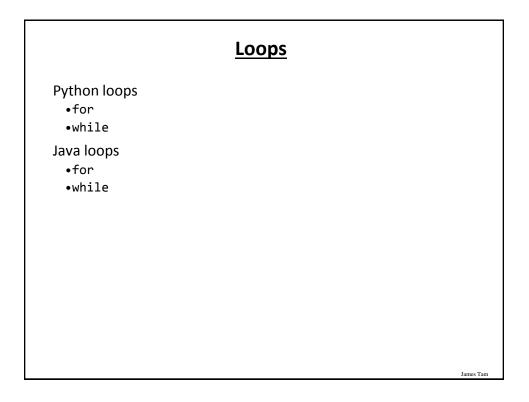

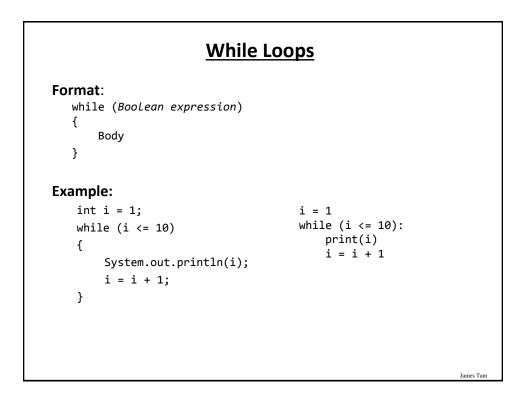

Switch: Mix and Match Use Of 'Break' (2)

```
line = in.nextLine ();
letter = line.charAt(FIRST);
switch (letter)
{
   case 'A':
   case 'a':
      gpa = 4;
      break;
   case 'B':
   case 'b':
      gpa = 3;
      break;
   case 'C':
   case 'c':
      gpa = 2;
      break;
```

```
Switch: Mix and Match Use Of 'Break' (3)
          case 'D':
          case 'd':
             gpa = 1;
             break;
          case 'F':
          case 'f':
             gpa = 0;
             break;
          default:
             gpa = -1;
       } // End of switch (determining GPA)
       System.out.println("Letter grade: " + letter);
       System.out.println("Grade point: " + gpa);
   }
}
                                                             James Tam
```

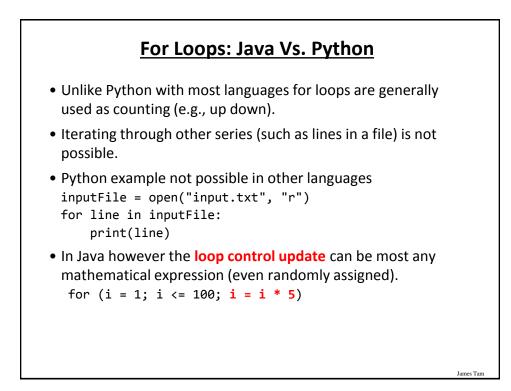

For Loops

```
Format:
```

```
for (initialization; Boolean expression; update control)
{
    Body
}
Example
for (i = 1; i <= 10; i++)
{
    System.out.println(i);
}</pre>
```

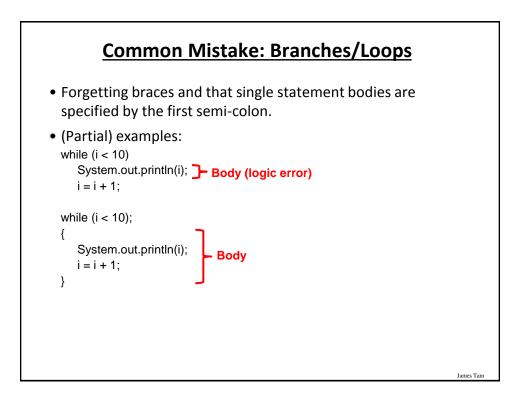

```
for i in range (1, 11, 1):
    print(i)
```

James Tan

For Loops: Java Vs. Python (2)

Also note in Java that the stopping boundary is explicit. for (i = 1; i <= 10; i++) -Vs. for i in range (1, 11, 1):

James Tarr

Many Pre-Created Classes Have Been Created

- Rule of thumb of real life: Before writing new program code to implement the features of your program you should check to see if a class has already been written with the features that you need.
- Note: for some assignments you may have to implement all features yourself rather than use pre-written code.
 You may receive little or no credit otherwise.
- The Java API is Sun Microsystems's collection of pre-built Java classes:

- http://java.sun.com/javase/8/docs/api/

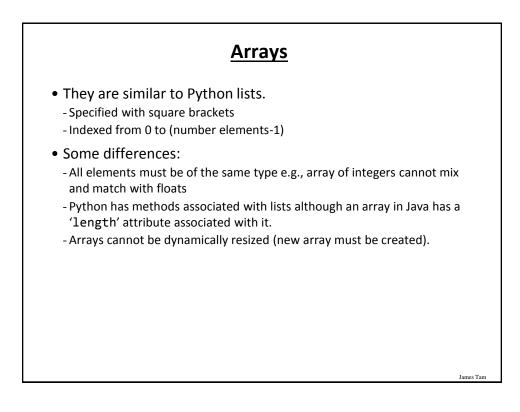

Example: Generating Random Numbers (Probabilities)

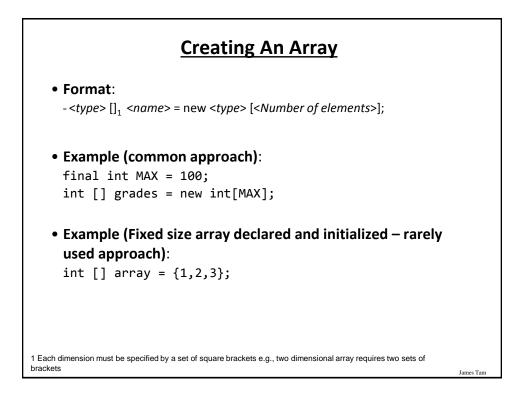

James Tan

James Tan

```
    Name of the (more complete example): DiceExample.java

 import java.util.Random;
 public class DiceExample
 {
     public static void main(String [] args)
     {
         final int SIDES = 6;
         Random generator = new Random();
         int result = -1;
         result = generator.nextInt(SIDES) + 1;
         System.out.println("1d6: " + result);
         result = generator.nextInt(SIDES) + 1;
         result = result + generator.nextInt(SIDES) + 1;
         result = result + generator.nextInt(SIDES) + 1;
         System.out.println("3d6: " + result);
     }
 }
```

Arrays: Complete Example

```
• Name of the (more complete example): GradesExample.java
public class GradesExample
{
    public static void main(String [] args)
    {
        final int MAX = 10;
        int [] grades = new int[MAX];
        int i = 0;
        Random generator = new Random();
    }
}
```

James Tan

Arrays: Complete Example (2) for (i = 0; i < MAX; i++)</pre> ſ grades[i] = generator.nextInt(101); } for (i = 0; i < grades.length; i++)</pre> { System.out.println("Element #" + i + " grade " + grades[i]); } } } Unlike Python lists you cannot pass an entire Java array in order to display the elements: [I@c351f6d System.out.println(grades); James Tam

After This Section You Should Now Know

- The basic structure required for creating a simple Java program as well as how to compile and run programs
- How to document a Java program
- How to perform text based input and output in Java
- The declaration of constants and variables
- Formatting output with the field width, precision and escape codes (elective)
- Converting between types using the casting operator
- What are the common mathematical and logical operators and how they work
- The structure and syntax of decision making and looping constructs

James Tan

James Tan

- How to generate random numbers
- How to create and work with Java arrays
